

Excellent prospects for junior staff inomed sponsors international IONM training program

Today's junior employees are tomorrow's future. Inomed also sees the future potential in the promotion of talent. With the ISIN Advanced Travel Grant worth 10.000 € inomed finances this year's internationally oriented training program and supports junior staff in the application of neurophysiological monitoring. This method is used wherever the protection of important neurological functions during surgical procedures is important. This can significantly reduce the risk of injury to the motor or sensory nervous system.

With this sponsorship and commitment inomed emphasizes the importance and sustainability of intraoperative neurophysiological monitoring (IONM) and aims to inspire young talents for this professional field.

Learning from renowned IONM experts

As part of the ISIN (International Society of Intraoperative Neurophysiology) Travel Grant Program, medical technicians are trained by the most experienced IONM specialists through intensive, hands-on training in specialized centres around the world. Applicants can choose from a list of IONM centres assigned to the ISIN. Some of the centres cover the full range of IONM, others offer expertise in specific IONM areas. The total duration of the training programme is 3-6 months. The ISIN combines unique IONM competence at the highest level. Accordingly, all participants benefit from competent knowledge transfer and valuable exchange of experience during this time.

Application safety is patient safety

Inomed not only focuses on the development of medical technology products, but also on the transfer of user know-how. Through the close cooperation with the Arkana Forum, Medical Education Center, inomed creates the connection to the practical training of users through certified courses and e-learning seminars as well as hands-on workshops at home and abroad.
